BENEX

Retaining Walls

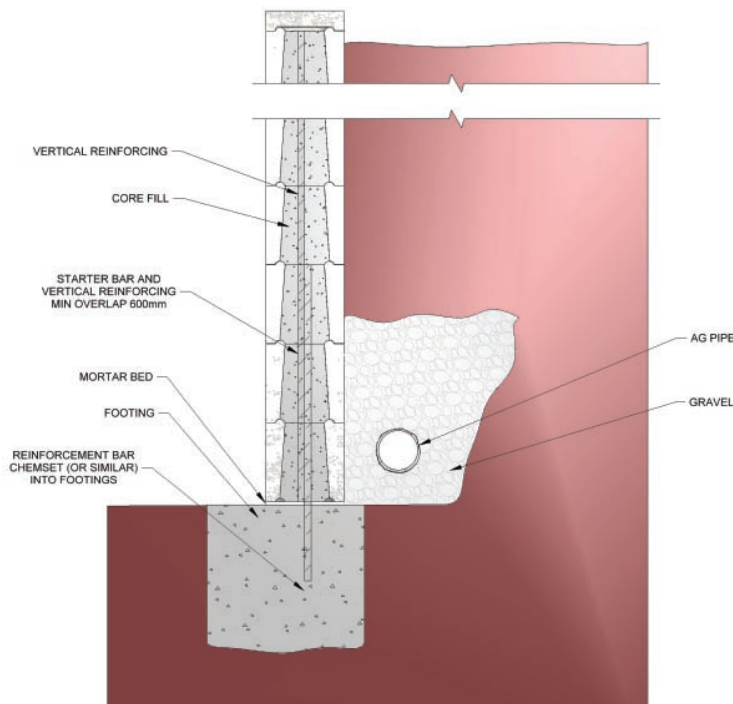

Using the Benex Wall System in landscaping applications will solve many current design and construction issues.

The Benex System is an ideal retaining wall solution. The Benex system can be reinforced both vertically and horizontally and core filled to act as retaining walls in many situations. The ease and speed of installing the Benex System eliminates additional trades and the consequential delays waiting on resources. The Benex Retaining Wall System also features capping blocks for the aesthetic finish of the header course. The wall can then be left raw, painted, bagged, or rendered.

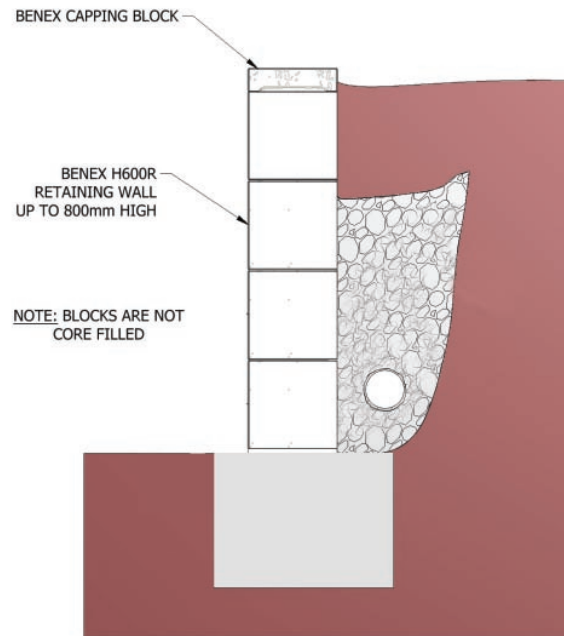

Another unique property of the Benex System is the ability to screw fix directly into the block. This allows the landscape designer and constructor to install seating, steps, and decks easily without relying on carpenters.

- ✓ No additional Tanking/Waterproofing
- ✓ Ideal for garden beds and planter boxes
- ✓ Reinforced vertically and horizontally
- ✓ Aesthetic finish (unpainted)
- ✓ Capping blocks available
- ✓ Speed of construction
- ✓ No mould, mildew, or rising damp
- ✓ Ease of fixing to the wall
- ✓ Choice of finishes

Always consult a structural engineer for specific engineering design and certification.
Each wall must be assessed on its own merit and approved by a qualified structural engineer.
